IN THE CLAIMS:

1. (Previously Amended) A storage system comprising:

a channel unit that transfers data sent from an upper-level system and transfers data to said upper-level system;

a plurality of cache units which are connected to said channel unit and in which data sent from said channel unit is stored;

a control unit that is connected to said cache units, and transfers or receives data to or from said cache units;

at least one first processor controlling transfer of data between said control unit and said plurality of cache units;

at least one second processor controlling transfer of data between said control unit and said plurality of cache units;

a disk device in which data sent from said control unit is stored; and a plurality of paths connecting said channel unit to said plurality of cache units.

- 2. (Original) A storage system according to Claim 1, wherein said plurality of paths includes a first path that links a first cache unit included in said plurality of cache units to said channel unit, and a second path that links a second cache unit included in said plurality of cache units to said channel unit.
- 3. (Original) A storage system according to Claim 2, wherein said first path and said second path are independent of each other.
- 4. (Original) A storage system according to Claim 2, wherein said first path is dedicated to communication between said first cache unit and said channel unit.
- 5. (Original) A storage system according to Claim 4, wherein said second path is dedicated to communication between said second cache unit and said channel unit.
- 6. (Original) A storage system according to Claim 1, wherein among said plurality of paths, a path linking said channel unit and a predetermined cache unit included in said

PATENT Serial No. 10/614,864 Docket No. 29284-593

plurality of cache units is not the same as a path linking said channel unit and an other cache unit included in said plurality of cache units.

- 7. (Original) A storage system according to Claim 2, wherein said first path directly links said first cache unit to said channel unit.
- 8. (Original) A storage system according to Claim 7, wherein said second path directly links said second cache unit to said channel unit.
- 9. (Original) A storage system according to Claim 2, wherein said first path links said first cache unit to said channel unit on a point-to-point basis.
- 10. (Original) A storage system according to Claim 9, wherein said second path links said second cache unit to said channel unit on a point-to-point basis.
- 11. (Original) A storage system according to Claim 1, wherein said disk device includes a plurality of disk drives, and said control unit is connected to said plurality of disk drives.
- 12. (Original) A storage system according to Claim 1, wherein said plurality of paths are signal lines linking said channel unit and said plurality of cache units.
- 13. (Original) A storage system according to Claim 1, wherein said plurality of paths are used to communicate a reading request, which is issued from said upper-level system, from said channel unit to one of said plurality of cache units, and used to communicate data read from said plurality of cache units to said channel unit.
- 14. (Original) A storage system according to Claim 1, wherein said plurality of paths includes a number of paths equal to a number of cache units included in said plurality of cache units.

PATENT Serial No. 10/614,864 Docket No. 29284-593

15. (Original) A storage system according to Claim 1, wherein said plurality of paths are used to communicate a writing request, which is issued from said upper-level system, and used to communicate data written from said plurality of channel units to one of said cache units.
